Secure Blockchain Development

Navigate the complexities of blockchain securely

INTERMEDIATE

In a world increasingly reliant on blockchain technology, ensuring security is crucial. This masterclass is tailored to equip participants with the technical knowledge and hands-on skills needed to navigate the complexities of blockchain securely, both at the architectural level and within the realm of smart contract development. This comprehensive course offers an immersive learning experience that empowers you to build and deploy blockchain applications with confidence, knowing that they are fortified against vulnerabilities and threats.

Objectives

This masterclass aims to provide participants with the essential expertise to develop and audit secure blockchain solutions. By the end of the course, you will be proficient in crafting robust blockchain architectures and creating secure smart contracts while understanding best practices for safeguarding against potential security risks, ensuring the integrity and reliability of blockchain-based systems.

/ Date: starts from March 2024, self paced
/ Location: online

/ Price: €495
/ Included:
* 5x2h online classes
* 4 interactive labs
* online personal feedback
